

Contents

1	Manifolds, Lie groups, Lie algebras	1
1.1	Introduction	1
1.2	Basic facts on smooth manifolds	4
1.2.1	1-forms and vector fields	6
1.2.2	Maps between manifolds and submanifolds	12
1.2.3	Distributions	15
1.2.4	k -forms	17
1.2.5	k -vector fields	22
1.2.6	Lie derivatives	24
1.3	Basic facts on Lie groups and Lie algebras	27
1.3.1	Matrix Lie groups and matrix Lie algebras	31
1.3.2	Lie group actions	33
1.3.3	Representations	36
1.3.4	Adjoint actions	38
1.3.5	Functions invariant under adjoint actions	42
1.3.6	The Killing form	43
1.3.7	Loop algebras	49
2	Poisson Structures	51
2.1	Poisson manifolds	51
2.1.1	Rank of a Poisson manifold	58
2.1.2	Examples	62
2.2	Symplectic manifolds	67
2.2.1	Examples	70
2.3	Foliation of a Poisson manifold	72
2.4	Construction of Poisson manifolds	78
2.5	Lie-Poisson structures	80
2.5.1	Lie-Poisson structure on \mathfrak{g}^*	80
2.5.2	Lie-Poisson structure on \mathfrak{g}	84
2.5.3	Symplectic foliation	86
2.5.4	Tensor formulation	91
3	Completely Integrable Systems	95

3.1	Introduction	95
3.2	Definition of complete integrability	95
3.2.1	Bi-Hamiltonian systems	98
3.2.2	Solvability by quadratures	101
3.3	The Arnold-Liouville Theorem	108
3.3.1	Existence of action-angle coordinates	113
4	R-brackets and r-brackets	117
4.1	Introduction	117
4.2	R -brackets	117
4.2.1	Double Lie algebras and linear R -brackets	120
4.2.2	Lie algebra splitting	122
4.2.3	Poisson involutivity and factorization theorems	124
4.2.4	Lax hierarchies	130
4.3	r -brackets	132
4.3.1	Lie bialgebras and coboundary Lie bialgebras	132
4.3.2	Linear r -brackets and Yang-Baxter equation	134
4.3.3	Poisson involutivity theorems	140
4.3.4	Tensor formulation of the linear R -bracket on \mathfrak{g}	144
5	Examples: Toda, Garnier, Gaudin, Lagrange	147
5.1	The open-end Toda lattice	147
5.1.1	Definition of the phase space and equations of motion	147
5.1.2	Algebraic setting	149
5.1.3	Complete integrability	149
5.2	The Garnier system	152
5.2.1	Complete integrability	153
5.3	The rational $\mathfrak{su}(2)$ Gaudin system	155
5.3.1	Algebraic setting	155
5.3.2	Definition of the phase space and equations of motion	156
5.3.3	Complete integrability	157
5.3.4	Algebraic contractions of the phase space	160
5.3.5	From rational $\mathfrak{su}(2)$ Gaudin systems to Lagrange top systems	162
6	The Problem of Integrable Discretization	165
6.1	Introduction	165
6.2	An integrable discretization of the Euler top	167
6.2.1	The Kahan-Hirota-Kimura discretization	167
6.2.2	The Kahan-Hirota-Kimura discretization of the Euler top	169
6.2.3	Explicit solutions	172
6.3	An integrable discretization of the rational $\mathfrak{su}(2)$ Gaudin system	176
