

Contents

Contents	i
1 Direct arguments	1
1.1 Auxiliary constructions	1
1.2 Sequent calculus	2
1.3 Cut elimination	5
1.4 ϵ -calculus	12
1.5 Other systems	13
1.6 Infinitary proofs	16
2 Gentzen games	19
2.1 Gentzen trees	19
2.2 Syntactic moves	20
2.3 Strong termination	29
3 Ordinals	31
3.1 Well Orderings	31
3.2 Arithmetical operations	32
3.3 Delayed decisions	34
4 Transfinite induction	37
4.1 Transfinite induction	37
4.2 Ordinal bounds	41
4.3 Bounds for provable transfinite induction	45
4.4 Arithmetical systems	47

5	Quantifiers	49
5.1	Skolem and quantifiers	49
5.2	Gödel's interpretation	52
5.3	The proof	55
5.4	Discussion	60
5.5	Spectors interpretation	63
5.6	ϵ -calculus	67
6	Finite trees	71
6.1	Ordering trees	71
6.2	Deciding the ordering	74
6.3	Embeddings	75
6.4	Some calculations	77
7	Constructing trees	81
7.1	Building up from below	81
7.2	Normal functions and ordinal notations	87
7.3	Further calculations	90
7.4	Proof of wellordering	95
8	Combinatorics	99
8.1	Ramsey's theorem	99
8.2	Kruskal's theorem	101
8.3	Linearization	105
8.4	Transfinite induction	108
9	Labeled trees	111
9.1	Extending finite trees	111
9.2	Well ordering of finite labeled trees	116
