|--|-----------|
| <b>1. Introduction .....</b>                                       | <b>1</b>  |
| 1.1. State of the art.....   | 5         |
| 1.2. Aim of this work.....   | 8         |
| <b>2. Piezoelectricity and vibrating structures.....</b>           | <b>11</b> |
| 2.1. Piezoelectricity .....  | 11        |
| 2.1.1. Piezoelectric effect.....                                   | 12        |
| 2.1.2. Constitutive equations for piezoelectric materials .....    | 13        |
| 2.1.3. Piezoelectric nonlinearities.....                           | 18        |
| 2.1.4. Piezoelectric transducers and actuators.....                | 23        |
| 2.2. Vibrating structures.....                                     | 25        |
| 2.2.1. Modal analysis .....  | 26        |
| 2.2.2. Modal analysis of a thin cantilevered beam .....            | 28        |
| 2.2.3. Modal analysis of a thin plate.....                         | 36        |
| 2.3. Piezoelectric Vibrating Structures (PVS).....                 | 42        |
| 2.3.1. Piezoelectric static actuation in a PVS .....               | 43        |
| 2.3.2. Dynamic model of a PVS – Rayleigh-Ritz formulation .....    | 51        |
| 2.3.3. Transfer functions for a PVS .....                          | 66        |
| <b>3. Self sensing techniques for piezoelectric materials.....</b> | <b>69</b> |
| 3.1. Strain and stress reconstruction .....                        | 70        |
| 3.1.1. One step reconstruction .....                               | 71        |
| 3.1.2. Two steps reconstruction.....                               | 72        |
| 3.2. Dimensioning of self sensing piezoelectric plates.....        | 78        |
| 3.3. Bridge-circuit based reconstruction .....                     | 81        |

|           |  |            |
|-----------|--|------------|
| 3.3.1.    | Limits of a typical bridge based self sensing technique .....                        | 83         |
| 3.3.2.    | Adaptive algorithms for self sensing techniques.....                                 | 84         |
| 3.3.3.    | Limits of the linear piezoelectric capacitance model .....                           | 87         |
| 3.4.      | Hysteretic dynamic model of a PVS .....  | 89         |
| 3.4.1.    | Transfer functions for a PVS with self sensing actuators .....                       | 91         |
| 3.5.      | Hysteretic model based reconstruction.....   | 95         |
| 3.6.      | Self sensing techniques implementation.....  | 100        |
| 3.6.1.    | Self sensing analogic implementation .....   | 100        |
| 3.6.2.    | Self sensing digital implementation .....  | 102        |
| 3.6.3.    | Self sensing digital and hybrid implementations<br>with adaptive identification..... | 105        |
| <b>4.</b> | <b>Electronics for self sensing applications.....</b>                                | <b>107</b> |
| 4.1.      | Variable capacitance multiplier.....   | 107        |
| 4.2.      | Sawyer Tower circuit .....   | 109        |
| 4.3.      | Active Sawyer Tower circuit .....  | 112        |
| 4.3.1.    | Active Sawyer Tower for power demanding applications..                               | 115        |
| 4.4.      | Active Sawyer Tower with temperature measurement .....                               | 120        |
| <b>5.</b> | <b>Experimental verification and results .....</b>                                   | <b>127</b> |
| 5.1.      | Piezoelectric cantilevered beam.....   | 128        |
| 5.1.1.    | Experimental set up description .....  | 128        |
| 5.1.2.    | Structural frequency response .....  | 131        |
| 5.1.3.    | Self sensing linear reconstruction.....  | 133        |
| 5.1.4.    | Self sensing hysteretic reconstruction .....   | 135        |
| 5.1.5.    | Open loop response comparison.....   | 138        |
| 5.1.6.    | Vibration control with self sensing reconstruction.....                              | 139        |
| 5.2.      | Partially clamped piezoelectric plate.....   | 141        |
| 5.2.1.    | Experimental set up description .....  | 141        |

|           |  |            |
|-----------|--|------------|
| 5.2.2.    | Structural frequency response.....                             | 144        |
| 5.2.3.    | Self sensing linear reconstruction .....                       | 145        |
| 5.2.4.    | Self sensing hysteretic reconstruction .....                   | 147        |
| 5.2.5.    | Vibration control with self sensing reconstruction .....       | 150        |
| 5.3.      | Comparison between linear and hysteretic reconstructions ..... | 155        |
| <b>6.</b> | <b>Conclusion .....</b>  | <b>157</b> |
|           | <b>Bibliography.....</b>                                       | <b>161</b> |
| <b>A.</b> | <b>A modified Prandtl-Ishlinskii model .....</b>               | <b>167</b> |
| A.1.      | Definition of the MPI model.....                               | 167        |
| A.2.      | Definition of the inverse MPI model.....                       | 170        |
| A.3.      | Identification of the MPI model.....                           | 170        |
| A.4.      | A MPI model with creep .....                                   | 172        |
| A.5.      | Identification example .....                                   | 174        |
| <b>B.</b> | <b>Vibration control .....</b>                                 | <b>177</b> |
| B.1.      | Positive Position Feedback (PPF) controller .....              | 178        |
| B.2.      | Resonant controller.....                                       | 183        |
