Introduction	1
1 Monitoring general gradual changes	5
1.1 Setting of the problem	6
1.2 Stopping times	9
1.2.1 Stopping times for known in-control parameters	9
1.2.2 Stopping times for unknown in-control parameters	12
1.2.3 Variance of the detectors	14
1.3 Asymptotics under the null hypothesis	16
1.3.1 Asymptotics for known in-control parameters	16
1.3.2 Asymptotics for unknown in-control parameters	21
1.3.3 Estimating the scale parameter	26
1.4 Consistency of the testing procedures	28
1.4.1 Consistency for known in-control parameters	28
1.4.2 Consistency for unknown in-control parameters	31
1.4.3 Local alternatives	33
1.5 Asymptotic normality of the delay times	35
1.5.1 Asymptotic normality of the delay times for known in-control parameters	35
1.5.2 Asymptotic normality of the delay times for unknown in-control parameters	44
1.6 Finite sample behavior	50
1.7 Some calculations	56
2 Monitoring gradual changes in renewal processes	61
2.1 Setting of the problem	63
2.2 Stopping times	65
2.2.1 Randomness of the sample size	65
2.2.2 Stopping times for known in-control parameters	67
2.2.3 Stopping times for unknown in-control parameters	69
2.2.4 Variance of the detectors	71
2.3 Preliminary results	73
2.3.1 Invariance principle under the null hypothesis	73
2.3.2 Behavior under the alternative	75
2.4 Asymptotics under the null hypothesis	77
2.4.1 Asymptotics for known in-control parameters	77

2.4.2	Asymptotics for unknown in-control parameters	83
2.5	Consistency of the testing procedures	88
2.5.1	Consistency for known in-control parameters	88
2.5.2	Consistency for unknown in-control parameters	91
2.6	Asymptotic normality of the delay times	96
2.6.1	Asymptotic normality of the delay times for known in-control parameters	96
2.6.2	Asymptotic normality of the delay times for unknown in-control parameters	120
2.7	Finite sample behavior	137
2.7.1	Closed-end setting	138
2.7.2	Open-end setting	142
