TABLE OF CONTENT

1 Introduction 1

1.1 Relevance of the Age Estimation Challenge 3

1.2 The Research Gaps 4

1.3 Contribution of this Thesis 5

1.4 Topics Outside the Scope of this Thesis 8

1.5 Structure of the Thesis 9

2 State of the Art 13

2.1 Latent Fingerprint Age Estimation 13

2.1.1 Contact-Based Morphological Approaches 14

2.1.2 Contact-Based Substance-Specific Approaches 17

2.1.3 Contactless Morphological Approaches 18

2.1.4 Contactless Substance-Specific Approaches 20

2.1.5 Image-based Statistical Approaches 21

2.2 Contactless Capturing Devices 21

2.3 Digital Processing Methods 26

2.3.1 Image Preprocessing Methods 26

2.3.2 Image Features 27

2.3.3 Decision-Making Strategies 28

2.4 Influences on Fingerprint Aging 28

3 A new Approach Towards Latent Fingerprint Age Estimation 31

3.1 Methodology and Concepts 31

3.1.1 Absolute vs. Relative Age 31

3.1.2 Short- and Long-Term Aging 32

3.1.3 The Concept of Time Series 33

3.1.4 Non-Invasive Devices Selected for Investigation 33

3.1.5 The Used Indoor Application Scenario 34

3.1.6 The Digital Processing Pipeline 34

3.1.7 The Used Quality Measures 36

3.2 Basic Assumptions and Research Objectives 36

3.2.1 Assumptions 37

3.2.2 Research Objectives 38

3.2.2.1 Objective 1 (O1): Design of the Data Acquisition Process 38

3.2.2.2 Objective 2 (O2): Design of Digital Preprocessing Methods 38

3.2.2.3 Objective 3 (O3): Design of Digital Aging Feature Sets 39

3.2.2.4 Objective 4 (O4): Design of Digital Age Estimation Strategies 39

3.2.2.5 Objective 5 (O5): Modeling Influences on Fingerprint Aging and the Capturing Process 39

4 Design of the Proposed Digital Processing Pipeline 41

4.1 Design of the Data Acquisition Process (O1) 42
4.1.1 Basic Sensor Settings 42
4.1.2 Challenges From the Used Capturing Devices 42
4.1.3 Quality Measures for the Data Acquisition Process 47
4.2 Design of Digital Preprocessing Methods (O2) 47
4.2.1 Spatial Alignment (PC1) 49
4.2.2 Background Mask Creation (PC2) 51
4.2.2.1 Binarization Techniques for Intensity Images of Both Capturing Devices 52
4.2.2.2 Binarization Techniques for Topography Images of Both Capturing Devices 55
4.2.3 Temporal Normalization (PC2) 61
4.2.4 Segmentation (PC3) 62
4.2.4.1 Fingerprint Raw Data (ST1) 63
4.2.4.2 Binarized Fingerprint Data (ST2) 64
4.2.4.3 Enhanced Ridge Segmentation (ST3) 64
4.2.4.4 Pores and Specific Particle Types (ST4) 67
4.2.5 Distortion Correction (PC4) 72
4.2.5.1 Reduction of Fluctuations in Image Brightness 73
4.2.5.2 Exclusion of Null Values 73
4.2.5.3 Exclusion of Out of Range Images 74
4.2.5.4 Reduction of Temperature Distortions 74
4.2.5.5 Reduction of Vibrations and Measurement Table Propulsion Distortions 74
4.2.5.6 Reduction of Dust 75
4.2.6 Valid Pixels Mask Creation (PC5) 77
4.2.7 Quality Measures For Digital Preprocessing Methods 77
4.3 Design of Digital Aging Feature Sets (O3) 78
4.3.1 Statistical Feature Set for Short- and Long-Term Aging Series 79
4.3.1.1 Binary Pixels (F1) 80
4.3.1.2 Mean Image Gray Value (F2) 81
4.3.1.3 Global Standard Deviation (F3) 82
4.3.1.4 Mean Local Variance (F4) 82
4.3.1.5 Mean Gradient (F5) 82
4.3.1.6 Mean Surface Roughness (F6) 83
4.3.1.7 Coherence (F7) 83
4.3.2 Morphological Feature Set for Long-Term Aging Series 84
4.3.2.1 Mean Ridge Thickness (F8) 84
4.3.2.2 Area, Amount and Average Size of Pores (F9-F11) 86
4.3.2.3 Dust, Particles and Puddles (F12-F15) 87
4.3.3 Quality Measures for Digital Aging Feature Sets 89
4.4 Design of Digital Age Estimation Strategies (O4) 90
4.4.1 Formula-Based Age Estimation 92
4.4.2 Machine-Learning Based Age Estimation 94
4.4.3 Quality Measures for Digital Age Estimation Strategies 98
4.5 Modeling Influences on Fingerprint Aging (O5) 99
4.5.1 Selected Influences from own Published CWL Studies 99
4.5.2 Selected Scan Influences 100
4.5.3 Selected Environmental Influences 101
4.5.4 Selected Sweat Influences 102
4.5.5 Quality Measures for Influences on Fingerprint Aging 103

5 Experimental Test Setup 105

5.1 Test Goals 106

5.1.1 Test Goal 1 (TG1): Selection of Basic Sensor Settings 106
5.1.2 Test Goal 2 (TG2): Selection of Digital Fingerprint Binarization Techniques 106
5.1.3 Test Goal 3 (TG3): Evaluation of Digital Aging Feature Sets 106
5.1.4 Test Goal 4 (TG4): Evaluation of Digital Short-Term Age Estimation Strategies 106
5.1.5 Test Goal 5 (TG5): Evaluation of Selected Short-Term Influences and Model Creation 107

5.2 Software Implementation 107

5.3 General Test Setup 108

5.4 Setup for TG1: Selection of Basic Sensor Settings 111

5.4.1 Quality Measure Specifications for TG1 112

5.5 Setup for TG2: Evaluation of Digital Fingerprint Binarization Techniques 112

5.5.1 Quality Measure Specifications for TG2 115

5.6 Setup for TG3: Evaluation of Digital Aging Feature Sets 115

5.6.1 Setup for Short-Term Aging Features 115
5.6.2 Setup for Long-Term Aging Features 116
5.6.3 Quality Measure Specifications for TG3 117

5.7 Setup for TG4: Evaluation of Digital Short-Term Age Estimation Strategies 117

5.7.1 Setup for Formula-Based Age Estimation 118
5.7.2 Setup for Machine-Learning Based Age Estimation 118
5.7.3 Quality Measure Specifications for TG4 120

5.8 Setup for TG5: Evaluation of Selected Short-Term Influences and Model Creation 121

5.8.1 Setup for Selected Influences from own Published CWL Studies 121
5.8.2 Setup for Selected Scan Influences 122
5.8.3 Setup for Selected Environmental Influences 123
5.8.4 Setup for Selected Sweat Influences 125
5.8.5 Quality Measure Specifications for TG5 125

6 Experimental Results: Discussion of Findings 127

6.1 Results for TG1: Selection of Basic Sensor Settings 128

6.2 Results for TG2: Selection of Digital Fingerprint Binarization Techniques 130

6.3 Results for TG3: Evaluation of Digital Aging Feature Sets 133

6.3.1 Evaluation of Statistical Short-Term Aging Features 133
6.3.1.1 Evaluation of Binary Pixels (F1) 136
6.3.1.2 Evaluation of Mean Image Gray Value (F2) 137
6.3.1.3 Evaluation of Global Standard Deviation (F3) 139
6.3.1.4 Evaluation of Mean Local Variance (F4) 141
6.3.1.5 Evaluation of Mean Gradient (F5) 141
6.3.1.6 Evaluation of Mean Surface Roughness (F6) 143
6.3.1.7 Evaluation of Coherence (F7) 143
6.3.2 Evaluation of Statistical Long-Term Aging Features 143
6.3.2.1 Evaluation of Binary Pixels (F1) 146
6.3.2.2 Evaluation of Mean Image Gray Value (F2) 147
6.3.2.3 Evaluation of Global Standard Deviation (F3) 148

6.3.2.4 Evaluation of Mean Local Variance (F4) 149
6.3.2.5 Evaluation of Mean Gradient (F5) 151
6.3.2.6 Evaluation of Mean Surface Roughness (F6) 151
6.3.2.7 Evaluation of Coherence (F7) 151
6.3.3 Evaluation of Morphological Long-Term Aging Features 152
6.3.3.1 Evaluation of Mean Ridge Thickness (F8) 152
6.3.3.2 Evaluation of Pores (F9-F11) 154
6.3.3.3 Evaluation of Dust, Particles and Puddles (F12-F15) 156

6.4 Results for TG4: Evaluation of Digital Short-Term Age Estimation Strategies 158
6.4.1 Evaluation of Formula-Based Age Estimation 158
6.4.2 Evaluation of Machine-Learning Based Age Estimation 161

6.5 Results for TG5: Evaluation of Selected Short-Term Influences and Model Creation 168
6.5.1 Summary of Evaluated Influences from own Published CWL Studies 169
6.5.1.1 Scan Influences Published in the Scope of this Thesis 169
6.5.1.2 Environmental Influences Published in the Scope of this Thesis 170
6.5.1.3 Sweat Influences Published in the Scope of this Thesis 170
6.5.1.4 Surface Influences Published in the Scope of this Thesis 173
6.5.1.5 Application Influences Published in the Scope of this Thesis 174
6.5.2 Evaluation of Selected Scan Influences 175
6.5.3 Evaluation of Selected Environmental Influences 178
6.5.4 Evaluation of Selected Sweat Influences 180
6.5.5 Creation of a First Qualitative Influence Model 182

7 Summary, Discussion and Future Work 185

7.1 Summary and Discussion of Results in Respect to the Addressed Research Gaps and Aims of this Thesis 185

7.2 Prospects and Limitations of Non-Invasive Capturing Devices and Digital Processing Methods for Age Estimation of Latent Fingerprints 187

7.3 Implications to Practical Age Estimation Application Scenarios 189
7.3.1 Age Estimation for Crime Scene Forensics 189
7.3.2 Data Privacy Protection in Daily Police Work 190
7.3.3 Enabling of Fingerprint Scans for Preventive Police Applications 191
7.3.4 Separation and Sequencing of Overlapped Fingerprints 191

7.4 Implications to the Forensic Domain 191

7.5 Future Work 192

8 Appendix 197

Bibliography 201
