Abstract	vii
Contents	xi
List of Figures	xv
List of Tables	xxiii
1 Introduction	1
1.1 Fundamental Concept of Content-based Microscopic Image Analysis .	1
1.2 Motivation of the Present Work	6
1.3 Contribution of the Present Work	10
1.4 Overview of this Dissertation	11
2 Related Work	13
2.1 Related Algorithms in CBMIA	13
2.1.1 Image Segmentation	13
2.1.2 Shape Features	15
2.1.3 Sparse Coding Features	17
2.1.4 Supervised Learning	18
2.1.5 Unsupervised Learning	21
2.1.6 Object Detection and Tracking	22
2.2 Biological Applications Using CBMIA	26
2.2.1 Microorganism Classification	26
2.2.2 Cell Clustering	34
2.2.3 Insect Tracking	35
2.3 Summary	36

3	Semi-automatic Microscopic Image Classification Using Strongly Supervised Learning	37
3.1	Overview of the System	37
3.2	Image Segmentation	39
3.2.1	Sobel Edge Detection and Morphological Operations	39
3.2.2	Semi-automatic Image Segmentation	45
3.3	Global Shape Features	47
3.3.1	Isomeric Edge Histogram Descriptor	47
3.3.2	Basic Geometrical Features	48
3.3.3	Fourier Descriptor	56
3.3.4	Internal Structure Histogram	58
3.4	Local Shape Features	59
3.5	Strongly Supervised Learning	60
3.5.1	Fundamentals of SVM	60
3.5.2	Radial Basis Function Kernel SVM	62
3.5.3	Late Fusion of SVM	62
3.6	Summary	64
4	Full-automatic Microscopic Image Classification Using Weakly Supervised Learning	65
4.1	Overview of the System	65
4.2	Sparse Coding Features	66
4.2.1	Sparse Coding	68
4.2.2	Non-negative Sparse Coding	70
4.3	Weakly Supervised Learning	70
4.3.1	Basic RBSVM	71
4.3.2	Improved RBSVM	73
4.4	Summary	76
5	Microscopic Image Clustering Using Unsupervised Learning	77
5.1	Overview of the System	77
5.2	Full-automatic Image Segmentation	79
5.2.1	Motivation	79
5.2.2	Techniques	79
5.3	Global Shape Features	81
5.3.1	Edge Histogram Descriptor	81
5.3.2	Higher-level Geometrical Feature	83
5.3.3	Shape Signature Histogram	85
5.3.4	Shape Context Feature	85

5.4	Unsupervised Learning	86
5.4.1	<i>k</i> -means Clustering	86
5.4.2	Clustering Evaluation	87
5.5	Summary	89
6	Object Tracking Using Interactive Learning	91
6.1	Fundamental Conception	91
6.2	Preliminaries	95
6.2.1	Object Detection and Preprocessing	96
6.2.2	Anatomical Model of Insect Body Parts	96
6.3	Interactive Object Tracking Framework	98
6.3.1	Object Classification	99
6.3.2	Constrained Frame-to-Frame Linking	100
6.3.3	Interactive KF Estimation and Annotation Query	101
6.3.4	Track Linking Through Merge Conditions	103
6.4	Summary	104
7	Applications and Experiments	107
7.1	Environmental Microorganism Classification	107
7.1.1	EM Dataset	107
7.1.2	Classification Using SSL	110
7.1.3	Classification Using WSL	117
7.2	Stem Cell Analysis and Clustering	120
7.2.1	Evaluation of Segmentation	121
7.2.2	Evaluation of Clustering	122
7.3	Insect Body Parts Tracking	125
7.3.1	Dataset and Experimental Setting	125
7.3.2	Experimental Results	127
7.4	Extended Experiments	132
7.4.1	CBMIR on EMDS Images	132
7.4.2	Late Fusion of Global Shape Features on MPEG-7 Dataset	134
7.4.3	EM Classification Using Pair-wise Local Features	137
7.5	Summary	139
8	Conclusion and Future Work	141
8.1	Conclusion	141
8.2	Future Work	144
