Abstract xi

Deutsche Kurzfassung xiii

1 Introduction 1
- 1.1 Motivation and Focus . . . 1
- 1.2 Contributions and Outline . . . 3

2 Background 7
- 2.1 The Consensus Problem . . . 7
- 2.2 Emergence of a new Research Field . . . 10

3 Output Synchronization 15
- 3.1 Homogeneous Linear Networks . . . 15
  - 3.1.1 Problem Formulation . . . 15
  - 3.1.2 Existence of a Solution . . . 17
  - 3.1.3 Distributed Control Design Methods . . . 20
- 3.2 Heterogeneous Linear Networks . . . 27
  - 3.2.1 Problem Formulation . . . 28
  - 3.2.2 Internal Model Principle for Synchronization . . . 29
  - 3.2.3 Robustness of Synchronization . . . 32
  - 3.2.4 Dynamic Diffusive Couplings . . . 37
- 3.3 Networks of Linear Parameter-Varying Systems . . . 39
  - 3.3.1 Problem Formulation . . . 40
  - 3.3.2 Parameter-Varying Invariance and the Synchronous Subspace . . . 42
  - 3.3.3 Homogeneous LPV Networks . . . 45
  - 3.3.4 Heterogeneous LPV Networks . . . 47
- 3.4 Summary and Discussion . . . 49

4 Cooperative Disturbance Rejection and Reference Tracking 51
- 4.1 Distributed Integral Action . . . 52
  - 4.1.1 Problem Formulation . . . 52
  - 4.1.2 Robust Synchronization under Constant Disturbances . . . 53
  - 4.1.3 Observer-based Distributed Control Laws . . . 56
  - 4.1.4 Cooperative Tracking of Constant Reference Signals . . . 58
- 4.2 Distributed Output Regulation . . . 60
  - 4.2.1 Problem Formulation . . . 62
  - 4.2.2 The Distributed Regulator . . . 67

4.2.3 Transient Synchronization: Identical Agents . . . 71
4.2.4 Transient Synchronization: Non-identical Agents . . . 75
4.2.5 Coupled States, Measurement Outputs, and Regulation Errors . . . 77
4.3 Summary and Discussion . . . 84

5 Motion Coordination for Groups of Nonholonomic Vehicles 87
5.1 Mobile Robots . . . 87
5.1.1 Problem Formulation . . . 88
5.1.2 Motion Coordination Algorithm . . . 89
5.2 Unicycle-type Vehicles with Constant Velocities . . . 93
5.2.1 Problem Formulation . . . 94
5.2.2 Coordination of the Vehicle Orientations . . . 97
5.2.3 Stabilization of Circular Formations . . . 99
5.3 Summary and Discussion . . . 106

6 Conclusions 109
6.1 Summary and Discussion . . . 109
6.2 Outlook . . . 112

A Technical Background 115
A.1 Linear Systems and Control Theory . . . 115
A.1.1 Preliminaries . . . 115
A.1.2 Stability . . . 116
A.1.3 Invariant Subspaces . . . 118
A.1.4 The Linear Quadratic Regulation Problem . . . 120
A.1.5 The Output Regulation Problem . . . 120
A.1.6 Linear Parameter-Varying Systems . . . 123
A.2 Graph Theory . . . 126

B Technical Proofs 131
B.1 On the proof of Theorem 3.1 . . . 131
B.2 Proof of Lemma 3.3 . . . 132
B.3 Proof of Theorem 3.12 . . . 132
B.4 Proof of Theorem 3.16 . . . 133
B.5 Proof of Theorem 3.17 . . . 133
B.6 Proof of Theorem 3.18 . . . 134
B.7 Proof of Theorem 3.19 . . . 135
B.8 Proof of Lemma 3.22 . . . 136
B.9 Proof of Theorem 3.26 . . . 136
B.10 Proof of Theorem 4.1 . . . 137
B.11 Proof of Theorem 4.2 . . . 138
B.12 Proof of Theorem 4.3 . . . 139
B.13 Proof of Lemma 4.5 . . . 140
B.14 Proof of Lemma 4.7 . . . 140
B.15 Proof of Theorem 4.8 . . . 141
B.16 Proof of Lemma 4.9 . . . 142
B.17 Proof of Theorem 4.10 . . . 142

B.18 Proof of Theorem 4.11 143
B.19 Proof of Theorem 5.1 143
B.20 Proof of Theorem 5.2 144
B.21 Proof of Theorem 5.4 145
B.22 Proof of Theorem 5.5 147
B.23 Proof of Theorem 5.7 147
B.24 Proof of Theorem 5.8 147
