Contents

1 Introduction **25**
- 1.1 Background . . . 25
- 1.2 Objective and Structure of Thesis . . . 30

2 Fundamentals of Turbulent Flows **35**
- 2.1 Energy Cascade . . . 35
  - 2.1.1 Turbulent Scales . . . 36
- 2.2 Mathematical Description of Flow . . . 37
  - 2.2.1 Decomposition Concepts . . . 37
  - 2.2.2 Averaged Conservation Equations . . . 38
  - 2.2.3 Turbulence Closure Models for Flow . . . 40
  - 2.2.4 Near Wall Turbulence . . . 41
  - 2.2.5 Concluding Remarks . . . 42

3 Fundamentals of Turbulent Combustion **45**
- 3.1 Phenomenology of Flame Front Propagation . . . 46
- 3.2 Classification Based on Flamelet Concept . . . 47
- 3.3 Premixed Combustion . . . 50
  - 3.3.1 Laminar Premixed Flames . . . 50
- 3.4 Laminar Flame Speeds . . . 51
  - 3.4.1 Guelder Laminar Flame Speed Correlation . . . 51
  - 3.4.2 Metghalchi and Keck Flame Speed Correlation . . . 52
- 3.5 Enthalpy of Unburned Gas . . . 53
- 3.6 Turbulent Premixed Flames . . . 53
  - 3.6.1 Turbulent Flame Speeds . . . 54
- 3.7 Two Phase Problem of Turbulent Combustion Modeling . . . 55
- 3.8 Mixture State . . . 57
  - 3.8.1 Statistical Methods . . . 58
- 3.9 Chemical kinetics . . . 60
  - 3.9.1 Elementary Reactions . . . 60
  - 3.9.2 Thermochemical equilibrium . . . 61
- 3.10 Flamelet Models for Turbulent Premixed Combustion . . . 62
  - 3.10.1 Coherent Flame Models . . . 63
  - 3.10.2 G-Equation Combustion Model . . . 66
  - 3.10.3 Review of Turbulent Flamelet Models . . . 68
- 3.11 Concluding Remarks . . . 69

4 Enhanced Flame Front Combustion with G-Equation 71
4.1 Combustion Modeling Approach . . . 71
4.2 Governing Equations . . . 73
4.2.1 Calibration of G . . . 76
4.2.2 G-equation for premixed turbulent combustion . . . 77
4.3 Implementation of G-equation in STAR-CD . . . 80
4.3.1 Modifications of transport equations for $\widetilde{G}$ and $\widetilde{G''^2}$ . . . 80
4.3.2 Model Closure - Turbulent Flame Speed . . . 81
4.3.3 Enhanced Laminar Flame Speed Correlation . . . 82
4.3.4 Reaction Progress Variable . . . 86
4.4 Premixed Combustion Mechanism . . . 88
4.4.1 Scalar and Species Concept . . . 89
4.4.2 Unburned State Species Concentrations . . . 90
4.4.3 Equilibrium State . . . 90
4.4.4 Equilibrium Temperature . . . 92
4.5 Spark Ignition Modeling . . . 94
4.6 Unburned Turbulence Equation . . . 94
4.6.1 Accessing the Unburned Gas Properties . . . 95
4.7 Level Set Methods . . . 96
4.7.1 Re-initialization Methods . . . 97
4.7.2 Calculation in Narrow Band . . . 101
4.7.3 Near Wall Behavior . . . 102
4.8 Concluding Remarks . . . 103

5 Self-Ignition Reaction Kinetics and Engine Knock Modeling 105
5.1 Engine Knock Fundamentals . . . 105
5.1.1 Theories of Knocking Combustion . . . 107
5.1.2 Knock Sensitivities and Knock Tendency . . . 109
5.1.3 Optical Diagnostics in Thermodynamic Engines . . . 115
5.2 Autoignition Fundamentals . . . 118
5.3 Modeling of Self-Ignition . . . 121
5.3.1 Ignition Delay Correlation Models . . . 121
5.3.2 Detailed Reaction Kinetics . . . 123
5.3.3 Tabulated Chemistry Knock Models . . . 123
5.3.4 Reduced Reaction Kinetics . . . 124
5.3.5 Shell Autoignition Model . . . 126
5.4 Engine Knock Modeling Approach . . . 128
5.5 DARS-Shell Autoignition Model . . . 130
5.5.1 DARS-Shell Reaction Rates . . . 130
5.5.2 Species Treatment . . . 132
5.5.3 Validation of DARS-Shell Autoignition . . . 134
5.5.4 Passive Knock Modeling . . . 137
5.5.5 Active Knock Modeling . . . 140
5.5.6 Implementation of DARS-Shell Model in STAR-CD . . . 141
5.6 Concluding Remarks . . . 144

6 Sensitivity Studies **147**
6.1 Enhanced Laminar Flame Speed Correlation . . . 147
6.1.1 EGR Validation and Sensitivity . . . 149
6.2 3D Test Case for G-equation Combustion . . . 151
6.2.1 G-Positioning and Unburned Turbulence Sensitivity . . . 152
6.2.2 Ignition Model Performance . . . 153
6.2.3 Comparison of Reinitialization Methods . . . 154
6.2.4 Narrow Band Performance . . . 160
6.3 Optimization of DARS-Shell Model Parameters . . . 160
6.3.1 Shell Model with EGR . . . 162
6.3.2 Ignition Delay Time Library . . . 163
6.3.3 DoE Optimization of Shell Parameters . . . 163
6.4 Concluding Remarks . . . 167

7 Validation Setup **169**
7.1 Test Engine Configuration . . . 169
7.1.1 Operating Points . . . 170
7.2 Boundary Conditions for 3D-CFD . . . 171
7.2.1 Pressure Trace Analysis . . . 172
7.2.2 Thermodynamic Analysis of In-Cylinder Pressure Signal . . . 173
7.2.3 Three Pressure Analysis . . . 174
7.2.4 Engine Wall-Heat Transfer Modeling . . . 175
7.3 Computational Grids . . . 178
7.4 Simulation Process Chain . . . 180
7.4.1 Spatial and Temporal Discretization . . . 183
7.4.2 Combustion Algorithm . . . 184
7.5 Concluding Remarks . . . 184

8 Results **187**
8.1 Engine Model Sensitivities . . . 188
8.1.1 Exemplary Combustion Model Comparisons . . . 188
8.1.2 G-Equation Mesh Sensitivity . . . 192
8.2 Gas-Exchange Validation . . . 193
8.2.1 General Flow field characteristics . . . 193
8.2.2 Gas-exchange characteristics . . . 195
8.3 G-Equation Combustion Validation . . . 201
8.3.1 Local Combustion analysis . . . 203
8.3.2 Global Burning Velocities . . . 204
8.4 DARS-Shell Engine Knock Validation . . . 206
8.4.1 Engine knock characterization . . . 207
8.4.2 Local knock onset determination . . . 210

9 Summary and Outlook **225**
9.1 Summary . . . 225
9.1.1 Combustion Model Innovations . . . 225
9.1.2 Autoignition Model Innovations . . . 226
9.1.3 Boundary Conditions and Holistic Validation Approach . . . 227

9.2 Outlook 229

Bibliography **231**

10 Appendix **251**
10.1 Laminar flame speed at high EGR rates 251
10.2 Integration of averaged turbulent flame speed 258
10.3 Engine Case Flame Front Propagation 260
