

# Contents

<b>1. Introduction</b>	<b>1</b>
1.1. Motivation . . . . .	1
1.2. State-of-the-art . . . . .	2
1.3. Contributions of the thesis . . . . .	16
1.4. Structure of this work . . . . .	17
<b>2. Speech of people with Parkinson’s disease</b>	<b>19</b>
2.1. Why does Parkinson’s disease affect speech? . . . . .	19
2.2. Characteristics of PD speech . . . . .	22
2.3. Existing scales to assess PD patients . . . . .	23
2.3.1. Unified Parkinson’s Disease Rating Scale (UPDRS) . . . . .	23
2.3.2. Hoehn & Yahr scale (H&Y) . . . . .	24
2.4. Existing methods and tools for speech therapy in PD patients . . . . .	24
2.4.1. Lee Silverman Voice Test (LSVT) . . . . .	25
2.4.2. Pitch Limiting Voice Treatment (PLVT) . . . . .	25
2.4.3. Computational tools for the assessment and guidance of speech therapy . . . . .	25
<b>3. Data collection</b>	<b>27</b>
3.1. Spanish . . . . .	27
3.1.1. Recruitment process . . . . .	27
3.1.2. General description of the participants and technical conditions for the recording process . . . . .	28
3.1.3. Speech tasks . . . . .	30
3.2. German . . . . .	31
3.2.1. Speech tasks . . . . .	32
3.3. Czech . . . . .	33
3.3.1. Speech tasks . . . . .	33
<b>4. Analysis of speech of patients with Parkinson’s disease</b>	<b>35</b>
4.1. Phonation analysis . . . . .	36
4.1.1. Periodicity . . . . .	36
4.1.2. Noise content . . . . .	37
4.1.3. Nonlinear behavior . . . . .	38
4.2. Articulation analysis . . . . .	43
4.2.1. Vocal space . . . . .	43
4.2.2. Spectral-Cepstral analysis . . . . .	45

4.2.3. Voiced-Unvoiced modeling . . . . .	47
4.3. Prosody analysis . . . . .	49
4.3.1. Features based on the fundamental frequency . . . . .	50
4.3.2. Features based on the short-term energy . . . . .	51
4.3.3. Features based on the duration . . . . .	53
4.4. Automatic classification and regression . . . . .	53
4.4.1. Hard-Margin Support Vector Machines (HM-SVM) . . . . .	54
4.4.2. Soft-Margin Support Vector Machines (SM-SVM) . . . . .	56
4.4.3. Regression using support vector machines . . . . .	59
<b>5. Experimental results</b>	<b>63</b>
5.1. Automatic detection of Parkinson’s disease in three languages . . . . .	63
5.1.1. Classification with phonation features . . . . .	64
5.1.2. Classification with articulation features . . . . .	67
5.1.3. Classification with prosody features . . . . .	80
5.1.4. Cross-language experiments . . . . .	82
5.2. Prediction of the neurological state of Parkinson’s patients . . . . .	84
5.2.1. Regression with 10-fold cross-validation . . . . .	84
5.2.2. Regression with the data of the Computational Paralinguistics Chal- lenge (ComParE) . . . . .	87
5.3. Analysis of the experimental results . . . . .	92
<b>6. Outlook</b>	<b>97</b>
<b>7. Summary</b>	<b>99</b>
<b>A. Speech recording protocol</b>	<b>103</b>
<b>B. Publications emerging from the development of this thesis</b>	<b>109</b>
<b>List of Figures</b>	<b>113</b>
<b>List of Tables</b>	<b>115</b>
<b>Bibliography</b>	<b>117</b>
