<b>Summary</b>	<b>vii</b>
<b>Zusammenfassung (German)</b>	<b>viii</b>
<b>1 Modern optical microscopy</b>	<b>1</b>
1.1 Introduction . . . . .	1
1.2 Ingredients for a good microscope . . . . .	2
1.2.1 Contrast . . . . .	2
1.2.2 Sensitivity . . . . .	4
1.2.3 Resolution . . . . .	5
1.3 Improving the resolution in fluorescence imaging . . . . .	8
1.3.1 Confocal scanning microscopy . . . . .	8
1.3.2 Structured illumination microscopy (SIM) . . . . .	8
1.4 Super-resolution fluorescence microscopy . . . . .	10
1.4.1 STED and STEDish techniques . . . . .	11
1.4.2 Single molecule localization microscopy . . . . .	14
1.5 Ongoing efforts . . . . .	21
1.6 State-of-the-art resolution . . . . .	23
<b>2 A high-NA cryogenic microscope</b>	<b>25</b>
2.1 Laser sources . . . . .	25
2.2 Detectors and sensors . . . . .	26
2.3 Optical setup . . . . .	27
2.4 Cryogenic setup . . . . .	33
2.4.1 First-generation cryostat setup . . . . .	33
2.4.2 Second-generation cryostat setup . . . . .	34
2.5 Experiment control and data acquisition . . . . .	37
<b>3 Low temperature photophysics of organic dye molecules</b>	<b>41</b>
3.1 Introduction . . . . .	41
3.2 Materials and methods . . . . .	43
3.2.1 Experimental setup . . . . .	43

3.2.2	Sample preparation . . . . .	43
3.3	Results and discussion . . . . .	45
3.3.1	Saturation measurements . . . . .	45
3.3.2	Ensemble and single molecule spectroscopy . . . . .	46
3.3.3	Effect of temperature on photobleaching . . . . .	47
3.3.4	Photoblinking of single molecules . . . . .	49
3.3.5	Photoblinking of multi-fluorophore conjugates . . . . .	52
3.3.6	Quenching of coupled fluorophores . . . . .	52
3.3.7	Fluorescence lifetime of multi-fluorophore systems . . . . .	55
3.3.8	Photoblinking of fluorophores with different quantum yields . . . . .	59
3.4	Summary . . . . .	61
<b>4</b>	<b>Single molecule localization analysis</b>	<b>65</b>
4.1	Image of a point source . . . . .	65
4.2	2D Gaussian fitting . . . . .	66
4.2.1	Localization accuracy . . . . .	66
4.2.2	Localization precision . . . . .	69
4.2.3	Maximum likelihood estimation . . . . .	71
4.2.4	Weighted least-squares fitting . . . . .	72
4.2.5	Implementation . . . . .	72
4.3	Orientation estimation with true PSF . . . . .	73
4.3.1	Theoretical background . . . . .	73
4.3.2	Implementation using maximum likelihood estimation . . . . .	75
4.3.3	Performance with test data . . . . .	76
4.3.4	Orientation fitting of experimental data . . . . .	77
4.4	Drift correction . . . . .	78
4.4.1	iSCAT channel for drift correction . . . . .	79
4.4.2	Lateral drift correction using intrinsic image information . . . . .	80
<b>5</b>	<b>Localization of single molecules with Ångström precision</b>	<b>83</b>
5.1	Introduction . . . . .	83
5.2	Materials and methods . . . . .	84
5.3	Measurements and discussion . . . . .	86
5.3.1	Photostability at cryogenic temperatures . . . . .	86
5.3.2	Drift . . . . .	87
5.3.3	Single-molecule localization . . . . .	87
5.4	Results . . . . .	88
<b>6</b>	<b>Visualization of dopamine receptor dimerization</b>	<b>91</b>
6.1	Introduction . . . . .	91
6.1.1	The importance of dopamine receptors . . . . .	91

6.1.2	Room-temperature studies . . . . .	92
6.2	Materials and methods . . . . .	94
6.2.1	Optical and cryogenic setup . . . . .	94
6.2.2	Sample preparation . . . . .	94
6.2.3	Dimer modeling . . . . .	96
6.3	Results and discussion . . . . .	96
6.3.1	Bayesian localization analysis . . . . .	97
6.3.2	Cryogenic localization microscopy of dopamine receptors . . . . .	98
6.4	Summary . . . . .	100
<b>7</b>	<b>Co-localization of two fluorophores at nanometer separation</b>	<b>101</b>
7.1	Introduction . . . . .	101
7.2	Materials and methods . . . . .	102
7.2.1	Sample preparation . . . . .	102
7.2.2	Cryogenic and optical setup . . . . .	103
7.3	Results and analysis . . . . .	103
7.4	Discussion . . . . .	106
7.5	Summary . . . . .	109
<b>8</b>	<b>Light microscopy of protein structure at Ångström resolution</b>	<b>111</b>
8.1	Introduction . . . . .	111
8.2	Materials and methods . . . . .	112
8.2.1	Optical and cryogenic setups . . . . .	112
8.2.2	Cover slip cleaning and bleaching chamber . . . . .	114
8.2.3	Protein labeling and sample preparation . . . . .	115
8.2.4	Single-molecule localization analysis . . . . .	117
8.2.5	Three-dimensional reconstruction . . . . .	117
8.2.6	Modeling of the crystal structure . . . . .	119
8.3	Results and discussion . . . . .	120
8.3.1	Cytosolic PAS domain of GtCitA . . . . .	120
8.3.2	Streptavidin Atto647N-biotin conjugates . . . . .	123
8.3.3	Orientation of individual proteins . . . . .	125
8.4	Summary . . . . .	127
<b>9</b>	<b>Conclusion and outlook</b>	<b>129</b>
9.1	Concluding remarks . . . . .	129
9.2	Future prospects . . . . .	130
	<b>Bibliography</b>	<b>135</b>
