

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Motivation . . . . .	1
1.2	Objective and outline of the thesis . . . . .	3
<b>2</b>	<b>Fundamentals</b>	<b>5</b>
2.1	Laminar premixed flames . . . . .	5
2.2	Turbulent flames . . . . .	9
2.3	$NO_x$ and $CO$ Emissions . . . . .	13
2.4	Thermo-acoustics . . . . .	16
<b>3</b>	<b>State of the art</b>	<b>19</b>
3.1	CFD based combustion modeling . . . . .	19
3.2	Modeling of $NO_x$ and $CO$ Emissions . . . . .	22
<b>4</b>	<b>CFD based approach for emission &amp; thermo-acoustic prediction</b>	<b>27</b>
4.1	Introduction . . . . .	27
4.2	The CFD Solver . . . . .	28
4.3	Combustion modeling approach . . . . .	33
4.3.1	Prototype flames for tabulated chemistry . . . . .	33
4.3.2	Transport of governing species . . . . .	36
4.3.3	Transport and thermodynamic properties . . . . .	39
4.3.4	Turbulence chemistry interaction . . . . .	41
4.3.5	Introduction of a novel thickening approach . . . . .	43
4.4	Emissions prediction . . . . .	47
4.4.1	Modeling approach . . . . .	47
4.4.2	Implementation . . . . .	49

4.5	Evaluation of thermoacoustic prediction method . . . . .	51
<b>5</b>	<b>Low order approach for <math>NO_x</math> emission prediction</b>	<b>55</b>
5.1	Introduction . . . . .	55
5.2	Modeling approach . . . . .	57
5.2.1	Chemical kinetics and the flamelet model . . . . .	57
5.2.2	Model description . . . . .	59
5.2.3	CFD-based mixture inhomogeneity . . . . .	62
<b>6</b>	<b>Lab-scale validation of CFD &amp; low order approach</b>	<b>69</b>
6.1	Introduction . . . . .	69
6.2	Validation of CFD-based approach . . . . .	69
6.2.1	Synthetic laminar test case (1D) . . . . .	69
6.2.2	Laboratory turbulent test case (3D) . . . . .	73
6.2.2.1	Boundary conditions and meshing . . . . .	74
6.2.2.2	Results . . . . .	76
6.2.2.3	Grid study . . . . .	81
6.2.2.4	Heat loss treatment . . . . .	82
6.3	Validation of the low order $NO_x$ prediction approach . . . . .	84
<b>7</b>	<b>Full-scale validation of CFD &amp; low order approach</b>	<b>87</b>
7.1	Introduction . . . . .	87
7.2	Experimental setup of high pressure multi-jet burner . . . . .	88
7.3	CFD-based emission and thermoacoustic predictions . . . . .	91
7.3.1	Operating conditions . . . . .	91
7.3.2	CFD-setup . . . . .	93
7.3.3	Thermoacoustic prediction . . . . .	96
7.3.4	Emission prediction . . . . .	103
7.4	Low order prediction of mixing influence on $NO_x$ emissions	109
7.4.1	Boundary conditions . . . . .	110
7.4.2	Mixing evaluation . . . . .	111
7.4.3	Results . . . . .	112
<b>8</b>	<b>Conclusions &amp; summary</b>	<b>117</b>
8.1	Lessons learned . . . . .	117
8.2	Summary . . . . .	120
	<b>Bibliography</b>	<b>123</b>
