Table of Contents

Abstract **xvii**

Deutsche Kurzfassung **xix**

1 Introduction **1**
1.1 Aerial Robots . . . 1
1.1.1 VTOLs for Aerial Robotics . . . 2
1.1.2 Quadrotors . . . 4
1.2 Aerial Physical Interaction (APhI) . . . 5
1.3 Aerial Manipulation . . . 6
1.4 On the Control of Underactuated Aerial Robots for APhI and Manipulation 8
1.4.1 Control of APhI . . . 8
1.4.2 Control of Aerial Manipulators . . . 9
1.5 Outline of this Thesis . . . 10
1.6 Open Problems and Contributions . . . 12

2 Quadrotor: Mathematical Model and Experimental Setup **15**
2.1 Quadrotor Model . . . 15
2.2 Simulation Setups of the Quadrotor . . . 17
2.3 Experimental Setup of the Quadrotor . . . 18
2.3.1 Hardware . . . 18
2.3.2 Software . . . 22

3 External Wrench Measurement and Estimation for an Aerial Robot **25**
3.1 Introduction . . . 25
3.2 Measurement of the External Wrench . . . 26
3.3 Estimation of the External Wrench . . . 30
3.4 Measurement vs Estimation . . . 32
3.5 Discussions . . . 32

4 Control of Aerial Physical Interaction using IDA-PBC **35**
4.1 Introduction . . . 35
4.1.1 Preliminaries . . . 36
4.2 Reshaping the Physical Properties of a Quadrotor for APhI . . . 39
4.2.1 Port-Hamiltonian Dynamics of a Quadrotor . . . 39
4.2.2 IDA-PBC of Quadrotors for Aerial Physical Interaction . . . 40
4.2.3 Total Energy Shaping . . . 41
4.2.4 Dissipation and External Wrench Shaping . . . 43
4.2.5 Using IDA-PBC for Turning Quadrotors into 3D Force Effectors . . 46

4.3 Numerical and Experimental Results . . . 47
4.3.1 Numerical Validation . . . 48
4.3.2 Experimental Results . . . 57
4.4 Discussions . . . 63

5 Design of a Compliant Actuator for Aerial Physical Interaction and Manipulation 65
5.1 Introduction . . . 65
5.2 Design of an Elastic-Joint Arm for Aerial Robots . . . 66
5.3 Identification and Control . . . 67
5.3.1 Parametric Identification . . . 67
5.3.2 Control of the Flexible-joint Arm . . . 70
5.4 Experimental Results . . . 71
5.5 Discussions . . . 75

6 Control of Aerial Manipulation using Differential Flatness and Exact Linearizability 77
6.1 Introduction . . . 78
6.1.1 Relative Degree, Exact Linearization and Differential Flatness . . . 79
6.2 Aerial Manipulators with Single Joint-Arm . . . 81
6.2.1 Nomenclature and Objectives . . . 83
6.2.2 Review of Exact Output Tracking . . . 85
6.2.3 Methodology . . . 87
6.2.4 Case RG: Rigid-joint Attached to a Generic Point . . . 88
6.2.5 Case RC: Rigid-joint Attached to the PVTOL CoM . . . 92
6.2.6 Case EG: Elastic-joint Attached to a Generic Point . . . 95
6.2.7 Case EC: Elastic-joint Attached to the PVTOL CoM . . . 100
6.2.8 Using Flatness for Optimal Trajectory Planning and Control . . . 103
6.2.9 Numerical Results . . . 105
6.2.10 Preliminary Experiments . . . 124
6.2.11 Discussions . . . 127
6.3 Protocentric Aerial Manipulators (PAMs) with Multiple Redundant Arms . 129
6.3.1 Case R: System Dynamics with Only Rigid Joints . . . 131
6.3.2 Case E: System Dynamics with Rigid and/or Elastic Joints . . . 133
6.3.3 Control for Case R . . . 137
6.3.4 Numerical Results . . . 139
6.4 Towards Control in 3D . . . 141
6.4.1 PAM in 3D . . . 142
6.4.2 Decentralized Flatness-Based Control . . . 144
6.4.3 Experimental Results . . . 149
6.4.4 Discussions . . . 153

7 Conclusions 157

A Technical Proofs 161
A.1 Proof of Proposition 1 . . . 161
A.2 Proof of Proposition 2 . . . 162

A.3 Proof of Proposition 3 . . . 163
A.4 Proof of Proposition 4 . . . 163
A.5 Proof of Proposition 5 . . . 164
A.6 Proof of Proposition 6 . . . 165
A.7 Proof of Proposition 7 . . . 166
A.8 Proof of Proposition 8 . . . 168
A.9 Proof of Proposition 9 . . . 170
A.10 Proof of Proposition 10 . . . 171

B Technical Computations **173**
B.1 Computation of the Inertia Matrix for (6.3.1) . . . 173
B.2 Computation of the Gravity and Coriolis Forces for (6.80) and (6.81) . . . 175
B.3 Computation of the Control Input Matrix for (6.83) . . . 180

C Nonlinear Systems, Stability and Control **181**
C.1 Known Concepts for the Nonlinear Systems Stability . . . 182
C.2 Connections Between Different Stability Concepts . . . 186

Bibliography **191**
