<b>Preface</b>	<b>iii</b>
<b>Zusammenfassung</b>	<b>xi</b>
<b>1 Preliminaries</b>	<b>1</b>
1.1 Function Spaces, Interpolation Theory and Basic Notation	2
1.2 A Short Glimpse on Operator Theory . . . . .	6
1.2.1 The Hilbert Space Case . . . . .	10
1.3 Maximal Regularity . . . . .	12
1.4 The Sum of Closed Operators . . . . .	23
1.5 Stokes Operator . . . . .	27
<b>2 Non-Autonomous Stokes System</b>	<b>33</b>
2.1 Coordinate Transformation . . . . .	36
2.2 Non-Autonomous Systems . . . . .	47
2.3 The Case of an Invertible Operator . . . . .	52
2.4 Maximal Regularity of the Transformed Stokes System . .	57
<b>3 Navier–Stokes Equations in a Non-cylindrical Time-Space Domain</b>	<b>67</b>
3.1 Preliminary Results to the Non-linear Problem . . . . .	68
3.2 Application to the Navier–Stokes Equations . . . . .	69

<b>4</b>	<b>Decay of a Weak Solution to the Navier–Stokes Equations</b>	<b>75</b>
4.1	Existence of Solutions . . . . .	76
4.2	Decay in Bounded Domains . . . . .	81
4.3	Decay in Exterior Domains . . . . .	83
<b>5</b>	<b>Decay of Turbulent Solutions to the Navier–Stokes Equations</b>	<b>93</b>
5.1	Existence of Serrin-type Strong Solutions . . . . .	94
5.2	On Serrin’s Uniqueness Condition . . . . .	100
5.3	Decay of Turbulent Solutions . . . . .	104
	<b>Index</b>	<b>115</b>
