Summary	xiii
Samenvatting	xvii
1 Introduction	1
1.1 Motion cueing algorithms	3
1.2 Cueing quality	5
1.2.1 Measuring Cueing Quality	6
1.2.2 Improving Cueing Quality	8
1.3 Research Goals	9
1.4 Approach	10
1.5 Scope	10
1.6 Outline	11
I Continuous Rating of Perceived Motion Incongruence	15
2 Continuous Subjective Rating of Perceived Motion Incongruence	17
2.1 Introduction	18
2.2 Continuous Rating Method	19
2.2.1 Background	19
2.2.2 Procedure	20
2.2.3 Measurements	21
2.2.4 Validation	22
Reliability	22
Validity	22
Applicability	23
2.3 Experiment	24
2.3.1 Independent variables	24
2.3.2 Dependent Variables	28
2.3.3 Apparatus	28
2.3.4 Participants	28
2.3.5 Procedure and Instructions	28
2.3.6 Hypothesis	29
2.4 Results	29
2.4.1 Reliability	29
2.4.2 Validity	30
2.4.3 Applicability	32
2.5 Discussion	35
2.5.1 Summary	35
2.5.2 Specific findings	35
2.5.3 Method considerations	37
2.6 Conclusion	39

3	Comparison filter- and optimization-based MCA	41
3.1	Introduction	42
3.2	Motion cueing algorithms	42
3.2.1	Filter-based motion cueing	42
3.2.2	Optimization-based motion cueing	43
3.2.3	Algorithm comparison	44
3.3	Methods.	45
3.3.1	Research questions	45
3.3.2	Apparatus.	45
3.3.3	Participants	46
3.3.4	Experimental procedure	46
3.3.5	Rating procedure	47
3.3.6	Stimuli	47
3.4	Results	48
3.4.1	Rating results and reliability.	48
3.4.2	Rating results per manoeuvre	49
3.4.3	Comparison between rating and cueing errors.	52
3.4.4	Motion cueing mechanisms	53
	Global scaling	53
	Washout	53
	Tilt-coordination	53
	Prepositioning	53
	Velocity buffering	54
3.4.5	Linear acceleration simulation in Daimler simulator	55
3.5	Discussion.	58
3.6	Conclusions	61
II	Modelling Perceived Motion Incongruence	63
4	Cueing Error Detection Algorithm	65
4.1	Introduction	66
4.2	Algorithm	67
4.2.1	Goal	67
4.2.2	Requirements	68
	Non binary shape and gain measures	69
4.2.3	Mathematical Cueing Error Definitions	70
4.2.4	Algorithm Overview	71
4.2.5	Shape and Gain Measures.	74
	Shape Measure	74
	Semblance	74
	Relevant semblance	78
	Averaging and smoothing	79
	Shape Measure Threshold	81
	Gain Measure	81
4.2.6	Algorithm Outcome	81
4.2.7	Algorithm Parameters	83

4.3	Motion Profiles	86
4.3.1	Dataset 1	86
4.3.2	Dataset 2	86
4.3.3	Error Detection Truth Data	88
4.4	Results	89
4.4.1	Dataset 1	89
4.4.2	Dataset 2	91
4.5	Discussion	94
4.6	Conclusion	96
5	Modelling Perceived Motion Incongruence	97
5.1	Introduction	98
5.2	The Model	99
5.2.1	Inputs	99
5.2.2	Output	100
5.2.3	Model Overview	101
	Non-Linear Part	102
	Linear Part	104
5.2.4	Model Parameters and Choices	105
5.3	System Identification Process	108
5.3.1	Step 1: Initial Parameter Selection	111
5.3.2	Steps 2 and 3: Input Selection and Order Reduction	111
	Selection Criteria	112
	Avoid Negative Input Contributions (ANIC)	114
5.3.3	Step 4: Parameter Estimation	114
5.3.4	Step 5: Model Explanatory Analysis	115
	Goodness of fit	115
	Negative input contributions	115
	Residuals	115
	Uncertainty Analysis	116
5.3.5	SI Process Parameters.	116
5.4	Analysis.	116
5.4.1	Models	116
	Basic	117
	Additional Inputs	118
	Including CEDA	118
5.4.2	Datasets	118
5.4.3	Methods	120
	Model Structure Analysis	120
	Model Explanatory Analysis	120
	Model Prediction Analysis	121
5.5	Results	121
5.5.1	Model Structure Analysis	121
5.5.2	Model Explanatory Analysis.	125
5.5.3	Model Prediction Analysis	130
5.6	Discussion.	130
5.6.1	SI Process	130
5.6.2	Models	133
5.6.3	Future work and recommendations	135

5.7	Conclusion	136
6	Model Transfer Between Experiments	137
6.1	Introduction	138
6.2	Experiments	139
6.2.1	CMS Experiment	139
6.2.2	Daimler Experiment	140
6.3	Model Transfer Parameter	142
6.3.1	MIR Model	142
6.3.2	Rating scales	143
6.3.3	MTP Estimation Process	145
6.4	Results	146
6.4.1	MTP Estimation	147
6.4.2	Between-Experiment Prediction	147
	CMS Data Results	148
	Daimler Data Results	149
6.4.3	Combined Experiment Fitting	153
6.5	Discussion	159
6.5.1	MTP estimation	160
6.5.2	Between Experiment Prediction	160
6.5.3	Combined Experiment Fitting	162
6.6	Conclusions	163
III	Minimizing Perceived Motion Incongruence	165
7	Optimizing Motion Cueing with a MIR Model	167
7.1	Introduction	168
7.2	MPC-based MCA	169
7.2.1	Prediction	169
7.2.2	Cost Function	170
	Perception-based Weights	170
7.2.3	MCA Output	172
	Predicted MIR	172
7.3	Experiment	175
7.3.1	Independent Variables and Dependent Measures.	175
7.3.2	Hypothesis	175
7.3.3	Apparatus.	175
7.3.4	Participants	175
7.3.5	Instructions and Procedures	176
7.4	Results	177
7.4.1	Data Processing	177
7.4.2	Consistency	177
	Overall Rating	177
	Continuous Rating	177
7.4.3	Participant Groups	180
7.4.4	Rating Results	181
7.5	Discussion	184
7.6	Conclusion	186

8	Conclusions and Recommendations	187
8.1	Measuring Perceived Motion Incongruence	187
8.2	Modelling Perceived Motion Incongruence	188
8.3	Minimizing Perceived Motion Incongruence	190
8.4	Recommendations	190
A	The Model: MIR Averaging	209
B	The Model: Optional Non-linear Subsystems	211
B.1	Rotational Rate.	211
B.2	Rotational Angle	212
C	SI Process: Estimating Criteria Thresholds	217
C.1	Synthetic Datasets	217
C.2	Results	218
C.3	Threshold Choice.	220
D	SI Process: Selection Criteria Parameters	221
D.1	Influence of W	221
D.2	Influence of ANIC	224
E	SI Process: Parameter Estimation	227
E.1	Maximum Likelihood Estimation.	227
E.2	Prediction Error Method for ARX model structures.	231
E.3	Influence of non-IDD noise	231
E.3.1	Noise Modelling.	232
E.3.2	Back Estimation of ARX parameters	237
E.3.3	Conclusion	239
F	MTP Estimation	241
F.1	Serial	242
F.2	Parallel	242
F.3	Discussion and Conclusion	244
G	Model Structure, Residual and Uncertainty Analysis	247
G.1	CMS Data Results	247
G.1.1	Model Structure	247
G.1.2	Model Fit	249
G.1.3	Model Prediction.	250
G.2	Daimler Data Results	250
G.2.1	Model Structure	250
G.2.2	Model Fit	256
G.2.3	Model Prediction.	259
G.3	Combined Experiment Fitting	260
G.3.1	Model Structure	260
G.3.2	Model Fit	260
