Abstract	ix
Deutsche Kurzfassung	xi
1 Introduction	1
1.1 Motivation and focus	1
1.2 Contributions and Outline	3
 Part I Analysis	
2 Reconstructing temporal and spatial dynamics from single-cell pseudotime	11
2.1 Background and problem formulation	12
2.2 MAPiT - <i>MAP</i> of pseudotime into real-Time	12
2.3 Reconstructing spheroids with MAPiT	15
2.4 Analysing cell cycle progression with MAPiT	22
2.5 Summary and discussion	25
3 Cell cycle analysis with ergodic principles and age-structured population models	29
3.1 Background and problem formulation	29
3.2 Age-structured population models	30
3.3 Relationship between ergodic analysis and age-structure population models	31
3.4 Cell cycle-dependent expression of Cyclin B1	37
3.5 Summary and discussion	42
4 Cell cycle progression inference	45
4.1 Background and problem formulation	45
4.2 Cell cycle progression inference with sensitivities	47
4.3 Evaluation with in silico data	51
4.4 Analysis of cell cycle progression	53
4.5 Summary and discussion	54
 Part II Control	
5 Passivity-based ensemble control for cell cycle synchronization	59
5.1 Background and problem formulation	59
5.2 Theoretical foundation	60
5.3 Ensemble control for cell cycle synchronization	62
5.4 Computational studies	66
5.5 Summary and discussion	71

6	Ensemble control for cellular oscillators	73
6.1	Background and problem formulation	73
6.2	Ensemble control for oscillator moments	76
6.3	Computational studies	80
6.4	Summary and discussion	83
7	Conclusions	85
7.1	Summary and discussion	85
7.2	Outlook	88
	Appendices	91
A	Technical background	93
A.1	Dynamical systems and control theory	93
A.2	Weakly connected oscillators	95
A.3	Fourier coefficients and circular moments	98
B	Experimental protocols and data preprocessing	101
B.1	Ordering cells in pseudotime	101
B.2	Establishment of NCI-H460/geminin cell line	103
B.3	Live cell microscopy	103
B.4	Flow cytometric analysis	104
B.5	Construction of the average cell cycle trajectory	104
B.6	Estimation of constant speed and noise from cell cycle lengths	105
C	Spheroid growth model	107
D	Cell cycle model	111
E	Technical computations and proofs	113
E.1	Speed equation	113
E.2	Derivation of ODE for $\varphi : s \mapsto x$	114
E.3	Calculation of division rate from cell cycle length distribution	115
E.4	Proof of Lemma 6.1	116
	Bibliography	117
	Publications of the Author	127
