

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Overview of proposed lossy compression method . . . . .	2
1.2	Outline . . . . .	3
1.3	Contributions . . . . .	6
1.4	Danksagung . . . . .	8
<b>2</b>	<b>Crash test simulation results</b>	<b>11</b>
2.1	Calculation of crash test simulation results . . . . .	12
2.1.1	Governing Equations . . . . .	12
2.1.2	Contact Algorithm . . . . .	19
2.1.3	Best practice . . . . .	20
2.2	Contents and properties . . . . .	22
2.3	Simulation data management systems . . . . .	24
<b>3</b>	<b>State-of-the-art compression methods</b>	<b>27</b>
3.1	Information theory and its limits on data compression . . . . .	28
3.1.1	Single random variables . . . . .	32
3.1.2	General stochastic processes . . . . .	34
3.1.3	Markov chains . . . . .	35
3.2	Types of data compression . . . . .	44
3.3	Components of data compression . . . . .	46
3.3.1	Quantization . . . . .	47
3.3.2	Prediction and transformation . . . . .	48
3.3.3	Encoding . . . . .	55
<b>4</b>	<b>Dimensionality reduction methods</b>	<b>71</b>
4.1	Previous work . . . . .	72
4.2	Principal component analysis . . . . .	74
4.2.1	Data model . . . . .	74
4.2.2	Singular value decomposition . . . . .	74
4.2.3	Properties . . . . .	75
4.2.4	Calculation of truncated singular value decompositions . . . . .	76
4.3	Predictive principal component analysis . . . . .	77
4.3.1	Gathering information . . . . .	79
4.3.2	Offline method . . . . .	79
4.3.3	Online method . . . . .	84
4.3.4	Crucial parameters . . . . .	90

4.3.5	Segmentation into parts . . . . .	99
<b>5</b>	<b>Induced Markov chains for data compression</b>	<b>103</b>
5.1	The induced Markov chain encoder . . . . .	104
5.2	Time complexity of iMc encoding . . . . .	111
5.3	Adaptive Arithmetic coding using iMc . . . . .	116
5.4	Theory of induced Markov chains . . . . .	119
5.5	Divergence of empirical and stationary distribution . . . . .	126
5.6	Choice of a spanning tree . . . . .	136
5.7	Combination with prediction methods . . . . .	137
5.7.1	Tree differences . . . . .	139
5.7.2	Lorenzo predictor . . . . .	140
5.7.3	Graph differences . . . . .	142
5.8	Differentiation of induced Markov chains . . . . .	150
5.8.1	Prediction by Partial Matching and Dynamic Markov Coding . . .	150
5.8.2	Bayesian Networks . . . . .	150
5.8.3	Markov Random Fields . . . . .	151
<b>6</b>	<b>Evaluation</b>	<b>153</b>
6.1	Methodology . . . . .	153
6.2	Benchmark data sets . . . . .	155
6.2.1	Chrysler Silverado . . . . .	155
6.2.2	OEM 1 . . . . .	157
6.2.3	OEM 2 . . . . .	157
6.3	PPCA's crucial parameters . . . . .	158
6.3.1	Number of principal components . . . . .	158
6.3.2	Internal Precision and amendment steps . . . . .	160
6.3.3	Small parts threshold . . . . .	162
6.4	Compression factors . . . . .	163
6.4.1	Silverado . . . . .	165
6.4.2	OEM 1 . . . . .	172
6.4.3	OEM 2 . . . . .	175
6.5	Run times . . . . .	178
6.6	Application fields . . . . .	182
<b>7</b>	<b>Conclusion</b>	<b>187</b>
7.1	Summary . . . . .	187
7.2	Outlook and future work . . . . .	189
7.2.1	Runtime . . . . .	189
7.2.2	Compression factor . . . . .	190
<b>A</b>	<b>Basic definitions and theorems</b>	<b>I</b>
A.1	Probability theory . . . . .	I
A.1.1	Definitions . . . . .	I
A.1.2	Statements and theorems . . . . .	II
<b>B</b>	<b>Ergodicity of Markov processes</b>	<b>VII</b>
