Abstract **xi**

Deutsche Kurzfassung **xiii**

1 Introduction **1**
1.1 Motivation 1
1.2 Related work 3
1.3 Contribution and outline of this thesis 6

2 Background **9**
2.1 Problem setup 9
2.2 Dissipativity properties 11
2.3 Integral quadratic constraints 14

3 Iterative schemes to determine input-output properties **17**
3.1 Gradient-based samplings schemes 18
3.2 Generalizations and extensions 47
3.3 Numerical examples 56
3.4 Summary 60

4 Offline approaches to determine input-output properties **61**
4.1 Data-driven characterization of input-output properties 63
4.2 Data-driven inference of optimal input-output properties 72
4.3 Guarantees for the infinite horizon 77
4.4 High dimensional numerical example 83
4.5 Summary 87

5 Bounds on input-output properties via a robust viewpoint **89**
5.1 Dissipativity from input-state trajectories 91
5.2 Dissipativity from noisy input-state trajectories 92

5.3 Dissipativity from input-output trajectories 101
5.4 Dissipativity from noisy input-output trajectories 106
5.5 Experimental application example 110
5.6 Summary 116

6 Conclusions **117**
6.1 Summary 117
6.2 Discussion 119
6.3 Outlook 121

Bibliography **123**
