

Table of contents

Table of contents	xii
1. INTRODUCTION.....	1
1.1. Quinoxalines and Quinoxalinones	1
1.1.1. Introduction	1
1.1.2. Synthesis and applications of quinoxalines and quinoxalinones	2
1.1.3. Synthesis of quinoxalines-based oligomers and their applications	5
1.1.4. Synthesis of HATN and applications.....	8
1.2. Wittig coupling.....	11
1.2.1. History and principle	11
1.2.2. Mechanism and stereochemistry	12
1.3. Stille Coupling.....	14
1.3.1. History and principle	14
1.3.2. Advantages and disadvantages.....	15
1.3.3. Mechanism study.....	16
1.4. Fluorine.....	20
1.4.1. Properties and perfluorinated compounds.....	20
1.4.2. F-SPE (Fluorinated Solid-Phase Extraction) and general stacking options for perfluorinated compounds	21
2. AIM OF THE WORK	25
3. MAIN PART.....	27
3.1. Synthesis of quinoxalines and quinoxalinones building blocks and their functionalizations	27
3.1.1. Functionalization of diamines.....	27
3.1.2. Synthesis of halogenated quinoxaline via quinoxalinone	30
3.1.3. Synthesis of quinoxaline scaffold.....	33

3.1.4.	Synthetic access to various quinoxaline derivatives	37
3.2.	Attachment of F-tails and alkyl tails	40
3.2.1.	Ether tails	40
3.2.2.	Acetal formation to tail attachment	43
3.2.3.	Heck coupling to tail attachment	43
3.3.	C-C direct connection oligomer	44
3.3.1.	Preparation of cross-coupling agent.....	44
3.3.2.	Stille cross-coupling of quinoxaline	47
3.3.3.	Optical properties	53
3.3.4.	Terquinoxaline C-H activation leading to HATN.....	54
3.4.	C=C bridges oligomer	57
3.4.1.	Quinoxaline-based phosphonium salts.....	58
3.4.2.	Wittig Coupling leading to oligomer	60
3.4.3.	Dimerization of oligomers	63
3.4.4.	Optical properties comparison	64
3.5.	C=X bridges oligomer	67
3.5.1.	Imine connection (C=N).....	67
3.5.2.	N=N bridged oligomer	70
3.6.	Triazole spacer	72
3.6.1.	Alkyne access <i>via</i> Sonogashira cross-coupling	72
3.6.2.	Tetrazolo quinoxaline and click reactions.....	74
3.7.	Cleavage attempts for the fluorine tail	77
4.	CONCLUSION AND OUTLOOK.....	81
4.1.	Quinoxalines and tail library	81
4.2.	C=C Wittig oligomers.....	82
4.3.	Asymmetric HATN	83

4.4. Outlook.....	84
5. Experiment part	87
5.1. General remarks.....	87
5.1.1. Devices and Analytical instruments.....	87
5.1.2. Solvents and reagents.....	90
5.2. Synthesis and characterization of individual compounds.....	92
5.2.1. Synthetic methods and characterization: quinoxaline derivatives	92
5.2.2. Synthetic methods and characterization: tail attachment	177
5.2.3. Synthetic methods and characterization: C-C connection.....	194
5.2.4. Synthetic methods and characterization: C=C bridge.....	226
5.2.5. Synthetic methods and characterization: C=X bridge.....	296
5.2.6. Synthetic methods and characterization: triazole spacer	298
5.2.7. Summary of most important attempts for the removal of the tail – table sufficient.....	309
6. REFERENCES	313
7. List of Abbreviation.....	327
8. APPENDIX	331
8.1. Crystallographic data.....	331
8.2. Curriculum vitae.....	354
8.3. Acknowledge.....	355
