1	Introduction	3
2	Fundamentals of engine efficiency and pre-chamber systems of spark ignition engines	9
2.1	Combustion efficiency principals and their impact on pre-chamber designs .	9
2.1.1	Efficiency reflection in closed engine cycles	10
2.1.2	Efficiency reflections in real engine combustion cycles	13
2.1.3	Combustion challenges in charged lean burn engines	15
2.1.4	Cyclic variation impact on efficiency	17
2.1.5	Combustion anomalies	19
2.1.6	Efficiency potentials that are objectives of a jet ignition and their design impact on the pre-chamber	20
2.1.7	Emissions and future operation fields of spark ignition engines with jet ignition	21
2.2	Spark ignition fundamentals	22
2.2.1	Spark plug structure	22
2.2.2	Spark formation and ignition	22
2.3	Pre-chambers for small volume spark ignition engines	26
2.3.1	Active pre-chambers	28
2.3.2	Passive pre-chambers	30
3	Experimental setup	31
3.1	Test bench setup	31
3.1.1	Institute of Internal Combustion Engines at the Karlsruhe Institute of Technology	31
3.1.2	Renault Sport Racing	32
3.1.3	Virtual test bench	32
3.2	Engine data	32
3.3	Pre-chamber ignition systems	33
3.3.1	Passive pre-chamber spark plugs	34
3.3.2	Pressure measurement inside the pre-chamber	35
3.3.3	Infrared spectroscopic measurement inside the pre-chamber	36
3.4	Spark deflection test chamber	39
3.4.1	Design of pre-chamber spark plugs in the test chamber experiment .	40
3.4.2	Spark deflection test chamber methodology	42

4	Results	45
4.1	Principal difference between engine operation points with and without pre-chamber	45
4.1.1	Impact on the spark formation	45
4.1.2	Impact on engine control signals	46
4.1.3	Impact on torque modulation	48
4.1.4	Impact on spark plug thread in the cylinder head	54
4.2	Test results of different passive pre-chamber designs	55
4.2.1	Passive pre-chamber with M12 spark plug thread	55
4.2.2	Passive pre-chamber with M10 spark plug thread	60
4.3	Pre-chamber with thermal barrier	62
4.4	Pre-chamber with and without resistor	64
4.5	Temperature measurement of the pre-chamber ignition system	66
4.5.1	Temperature measurement with M14 pre-chamber insert	67
4.5.2	Temperature measurement with M10 pre-chamber spark plug	69
4.6	Variation of different cap materials	70
4.7	Variation of orifice designs	74
4.8	Spark deflection test chamber results	76
4.8.1	M12 Single gap spark plug	80
4.8.2	M10 Single gap spark plug	83
4.8.3	M12 Multi gap spark plug	84
4.8.4	Comparison of the different spark plug designs	86
4.9	Pressure measurement inside the pre-chamber	87
4.9.1	Pressure inside the M12 pre-chamber measurement spark plug	87
4.9.2	Pressure inside the M14 pre-chamber insert	90
4.10	Optical measurement inside the combustion chamber	95
4.11	Determination of unburned fuel (hydrocarbons) inside the pre-chamber	98
4.11.1	Air-fuel equivalence ratio for fired and motored engine with direct and indirect fuel injection	99
4.11.2	Crank angle resolved lambda measurement	100
4.11.3	Impact of injection timing and global air-fuel ratio on the fuel delivery into the pre-chamber	102
4.12	Determination of burned fuel (carbon dioxide) inside the pre-chamber	106
4.13	Exhaust gas analysis with pre-chamber combustion	109
4.13.1	Measurement of hydrocarbon and nitrogen oxide emissions	109
4.13.2	Measurement of hydrocarbon and nitrogen oxide emissions with different fuels	111
5	Summary and conclusion	115
	Nomenclature	119
	Bibliography	134
