Kurzfassung	V
Abstract	VII
List of Abbreviations	XI
List of Symbols	XIII
1 Introduction	1
1.1 Motivation and problem statement	1
1.2 Objective and approach	2
2 State of the art in research and industry	3
2.1 Principles of the pultrusion process	3
2.1.1 Processed materials	4
2.1.2 Products and applications	7
2.2 Pultrusion process models	9
2.2.1 Heat transfer and cure models	9
2.2.2 Holistic process models	10
2.2.3 Process control models	10
2.3 Part quality, process monitoring and quality assurance	11
2.3.1 Criteria for part quality and process stability	11
2.3.2 Means for process monitoring and inline quality assurance	14
2.4 Process control	16
2.4.1 Process control variables	16
2.4.2 Quality related process correlations	17
2.4.3 Transient process interactions and startup control strategies	21
2.4.4 Model based process optimization	22
2.4.5 Quality oriented control approaches	23
2.5 Summary and conclusion	24
3 Data driven and multidisciplinary process analysis approach	27
3.1 System analysis of the pultrusion process	27

IX

3.1.1	Process conditions in pultrusion	28
3.1.2	Mechanisms of adverse resin film build-up in transient process states	30
3.2	Simulation supported, experimental process analysis	32
3.3	Control approach for the steady-state process condition	33
3.4	Control approach for transient process states	34
4	Material characterisation and modelling	37
4.1	Material analysis methods	38
4.1.1	Differential scanning calorimetry (DSC)	38
4.1.2	Laser flash analysis (LFA)	38
4.1.3	Rheometer	39
4.2	Epoxy resin	39
4.2.1	Cure kinetics	40
4.2.2	Density	43
4.2.3	Specific heat capacity and thermal conductivity	44
4.2.4	Viscosity	47
4.3	Fiber reinforcement	49
4.4	Composite material	49
5	Process model and numerical implementation	53
5.1	Physical and mathematical assumptions	53
5.2	Thermo-chemical process model	53
5.3	Numerical approach and software code implementation	54
5.4	Temperature- and process-control algorithms	57
6	Experiments and simulation	63
6.1	Inline sensor technology and data acquisition	64
6.1.1	Die-cavity pressure sensors	65
6.1.2	Ultrasonic sensor and signal processing	65
6.1.3	Laser profile scanner and surface quality quantification	67
6.1.4	Temperature measurement	69
6.1.5	Pull force measurement	69
6.1.6	Odometer and distance measurement	69
6.1.7	Offline void content analysis	69
6.1.8	Image based material analysis	69
6.2	Simulation model and model validation	70
6.3	Design of experiments and simulations	71
6.3.1	Process variable categories and data overview	73
6.3.2	Investigation of steady process states	73
6.3.3	Investigation of the transient process startup	75

7	Results and data analysis	83
7.1	Processing and correlation of steady-state data	83
7.1.1	Non-linear process relationships and stability threshold . .	83
7.1.2	Quality related correlation analysis	84
7.2	Analysis of transient simulation data	96
7.2.1	Influence of die design	97
7.2.2	Influence of startup method	98
7.2.3	Influence of process parameters	101
7.2.4	Comparison of practical startup scenarios	103
7.3	Discussion of the results in context of process control	104
7.4	Conclusion	106
8	Summary and outlook	109
	List of Figures	131
	List of Tables	135
	Publications	137
A	Material characterisation	139
B	Experiments and simulation	141
C	Results and data analysis	143
